

## Managed Hosting Services

**Simplify your power network management with managed hosting services from Meterlogic Solutions.**

Meterlogic managed hosting services support its energy and power metering Infrastructure (EPM) system, so you do not have to manage many of the day-to-day operations associated with supporting an EPM network. We manage and host your network in secure, tier-3 enterprise-class data centers located in multiple geographic areas, which enables you to experience the benefits of an EPM system, without the costly resources you would otherwise need if you chose to support the network with your own server farm. Our hosted software leverages as many as 12 different routes in fully monitored and managed secure server environments that have the redundancies needed to store all of your incoming metering data, which is critical to your billing processes, while helping to mitigate the risk of network failure that can happen if you rely on only a small number of routes. System and customer data is backed up on a scheduled daily basis, with off-site storage, to prevent data loss in the unlikely event of network failure. And, our software constantly analyzes network performance characteristics in real-time to ensure that you can access your metering data through the fastest, most reliable networks available.

Our highly trained metering network specialists focus exclusively on monitoring your EPM network – 24/7 – making sure that all components and metering devices within the EPM system are properly functioning and transmitting data. For example, if we notice that part of the network is not communicating data, we will inform you and take corrective action. Or, if we notice that you are not receiving data from a particular meter, we can troubleshoot the problem to determine the signal strength of the meter and whether or not it is necessary to send a field worker to see if the meter or transmitter has been disabled or tampered with. We also assume the role of installing and upgrading additional network software, as it is needed. By using Meterlogic's managed hosting services, you can experience all of the customer service, conservation and efficiency benefits provided by an EPM system – without the upfront data center costs or highly specialized resources you would need if you supported your network in-house. You can realize a significant time and cost savings, which allows you to focus on other important projects instead of having to worry about day-to-day system and network monitoring.

- Time & cost savings
- No need for in-house server and related infrastructure
- Secure data centers located in multiple geographic areas
- Quick & reliable access to stored metering data
- 24/7 network & intrusion monitoring
- No need to worry about additional software installations & upgrades

Find out more ways in which Meterlogic System can help you increase efficiencies, reduce costs, conserve water and energy, and improve customer service by calling us today at 1-720-320-3824 or visiting [www.meterlogic.com](http://www.meterlogic.com).

# Energy Intelligence as a Service (ElaaS)

## Intelligence that Drives the Network.

The Meterlogic Infrastructure Network — is a communications network that fully automates the meter power quality and data links meters and distribution sites devices in a single, highly efficient data network. Meterlogic's scalability enables customers to deploy new technologies in stages that are best suited to their needs and budgets.

## About Meterlogic

### Reliable Products & Services

With a successful track record for nearly a decade, Meterlogic is your Power and Energy Management partner. We provide innovative Consulting Services, Project Management, Power System Analysis, Contracting Services, and best in class products to meet your exact requirements. We can provide the road map to get you to where you want to be. Or, execute energy savings strategies right for you.

Meterlogic is an EcoXpert Partner certified by Schneider Electric. We use Schneider Electric metering solutions to enable energy cost savings, equipment utilization, and power quality monitoring to help reduce or eliminate down-time

From start to finish, or anywhere in between, call on us to meet your needs!!

Meterlogic provides Intelligent Metering solutions to optimize the delivery and use of energy and power quality data, water, gas, air or steam — or any combination of the three services — need innovative ways to increase efficiencies, reduce costs, conserve energy, and improve customer service. The Meterlogic Infrastructure Network from Meterlogic meets that need. Meterlogic provides, the most practical, respected and intuitive products in the Energy and PQ industry. Meterlogic offers a full line of Power Quality, Energy, water and gas meters, EPM systems and related products. We are committed to providing customers with the infrastructure technology needed to optimize their operations and ensure the sustainability of our Resources. By building on our expertise in power and energy management, we help customers better manage their operations and energy resources. Meterlogic is a leading marketer of infrastructure and products and services.

Find out more ways in which Meterlogic can help you increase efficiencies, reduce costs, conserve energy, and improve reliability by calling us today at 720-320-3824 or visiting [www.Meterlogic.com](http://www.Meterlogic.com).
